

Basingstoke MakerSpace

What you can create is only limited by your imagination. Our members have the expertise to guide even raw beginners through many different types of design and build. For the more knowledgeable sharing your enthusiasm with fellow experts is always inspiring.

**Open to Members
24/7**

The MakerSpace is a not-for-profit community in Basingstoke who enjoy learning, making and collaborating together to build and create things in a friendly environment - whether that is a prototype of a product you'd like to design, a game, a sewing project, website design, or practising your artistic or crafting techniques.

Our members can help whether you are interested in learning to use the range of tools on offer, exploiting Raspberry Pi, Arduino or micro:bit, creating eye catching signs, building electronics, understanding the latest advances in technology or recreating your favourite characters in Cosplay.

Evenings**

**7pm - 9pm
Every Tuesday
at Maritime House**

Come along to see what the MakerSpace has to offer. Discuss your projects with experts and find out how our tools and experience can help.

**Everybody
Welcome**

Basingstoke MakerSpace

Open Sessions

Every Tuesday evening, from 7pm to 9pm, there is an informal open session for members and potential members to get together.

Focused Project Tutorials

There are also frequent sessions focused on particular projects. Whether you want to fill your house with internet connected sensors, or make a Star Wars helmet, learning how from someone who's already an expert will help.

Tool Based Training

Members often require training to ensure the MakerSpace tools are used safely and efficiently. Sessions are available to ensure everyone gets the most out of all the tools available

Current Tools: Laser Cutter, 3D Printer, CNC Router, Vinyl Cutter, Woodworking & Metalworking tools

The space is equipped with the tools, you need to complete your projects. Some belong to the MakerSpace and others are on loan from our members. Experts are often available to help explain the optimal techniques to get the maximum benefit from each of the tools.

Current Activities: Raspberry Pi, Arduino, electronics, sewing, crafts, knitting and Linux

It doesn't matter if you've never soldered an LED or if you have more than 25 years of Linux experience, you will find a welcoming community that can help you build anything. Outside formal sessions members are also available to discuss, debate and advise.

Come to a Tuesday meeting
